E-mail	afv@aegean.gr

Adonis Velegrakis is Professor of Marine Geology at the Department of Marine sciences of the University of the Aegean.

He has more than 25-year research/teaching experience. He has participated as project leader / principal investigator in numerous European and National Competitive research programs on Coastal Oceanography and morphodynamics. He is an expert in environmental monitoring and modelling of coastal environments and has taken part in many large interdisciplinary national, European and international research projects relevant to the impacts of climate variability and change on the natural and human environment. He has authored/co-authored more than 100 relevant scientific papers in books, international academic journals and Conference Proceedings and was a contributing author to the 2012 IPCC SREX report.

He is a consultant of the United Nations Environment Organisation (UNEP) and the UN European Economic Commission (UNECE) on issues of coastal erosion and climate change.
