Kokkinos Dimitris holds a BSc in Civil Engineering with specialization in hydraulic engineering and he is a PhD Candidate and researcher at the Laboratory of Maritime Engineering & Maritime Works in Aristotle University of Thessaloniki.

His current research focuses on coastal morphodynamics/hydrodynamics, investigation of beach erosion processes, functional/constructional assessment of coastal protection works, coastal zone vulnerability to climate changes/extreme events and morphodynamic modelling. His research interests are also extended to hydraulic problems in cities such as rainwater management and sewer water management.

He has participated in several research projects (eg. CCSEAWAVS, InGreenCities) and he has co-authored several conference publications.
